

## **MOJAVE VS BIG SUR – WHICH IS BETTER FOR MAC?**

You want to upgrade your macOS version of Mojave to Big Sur but you are not sure if your device can handle Big Sur? Or you are not sure what the Big Sur entails? Or are you just looking for information concerning Mojave vs Big Sur in case you ever want to upgrade your Mac from Mojave to Big Sur? Regardless of what your reason might be, this article will be focusing on the functionality of the Mojave and Big Sur updates and finding out which update is better for the Mac. We will also be looking at the cons and pros of each version. Mojave vs Big Sur? Find out more about these updates as you scroll down below.

### **MOJAVE VS BIG SUR – WHICH IS BETTER?**

Mojave vs Big Sur, which is better? Let us find out with the points below;

The biggest and most noticeable difference between Mojave and Big Sur is that there is no longer iTunes. On Big Sur, the iTunes was replaced and split within three different apps, Music, Apple TV and Podcast. This has been a problem recently because most people are already used to having iTunes sync their media files and navigating through three different apps now would be nothing but stressful. And also when upgrading to Big Sur, the Music and TV apps do not recognise your old files from your iTunes. You will have to manually import your media files using the three apps individually. For some devices, you can use Finder to manage and organise your media files.

Also due to the latest development, compared to Mojave, apps on Big Sur have to seek permission to have access to your document files and folders. Mojave vs Big Sur in this context, the Big Sur is better because it is obviously more secure.

### **MOJAVE PROS**

- It is more reliable.
- It allows you to use iTunes to sync, backup and manage your files.
- It does not overly rely on web services.
- It can run 64 and 32 bit apps.
- It can run the last good permanent license of parallels to virtualize it for quick sessions.
- For most Mac devices, it is quicker and more stable.
- It only suffers minimal crashes compared to Big Sur.

### **MOJAVE CONS**

- With every new security update, the functionality of Mojave declines.
- Upgrade reminders do not work with Mojave.
- It does not support connecting your iPhone to your Mac device.
- Some apps, like the Apple store, will eventually stop working until you upgrade to Big Sur.

### **BIG SUR PROS**

- Has more security than Mojave.
- Has a better eGPU support.
- For most Mac devices, it is faster than the Mojave.
- It lets you easily connect your iPhone to your Mac device.
- It has a better and reliable interface.

## **BIG SUR CONS**

- It is quite laggy on animations, control centre and Safari for some Mac devices.
- It has some occasional glitches.
- Slow overall performance for some Mac devices.
- System extension handling is much harder.
- The OS X mail is slow for some Mac devices.
- Some programs may abruptly stop working.
- Texts can sometimes be blurry and can cause you to strain your eyes while looking at your Mac screen.
- Booting in safe mood and creating a new user for Big Sur can be extremely sluggish at first.
- System may become slow to recognize input/ repeated key input.
- The music and TV app does not recognize your files on your iTunes app.
- May cause some graphic problems for some Mac devices.
- You may need to rebuy some apps as older versions are not compatible with Big Sur.

## **IS IT OK TO UPGRADE FROM MOJAVE TO BIG SUR?**

It is not ok to upgrade from Mojave to Big Sur! There is a big bug which prevents an upgrade from Mojave to Big Sur, makes the progress bar get stuck and leaves the system in an unbootable state which locks the user out of their data. You will need to go from Mojave to Catalina to Big Sur. Although for some Mac versions, users did not experience this problem.

## **WILL BIG SUR SLOW DOWN MY MAC?**

If you are upgrading your Mac from a lower macOS version, Big Sur will not slow down your Mac as it is designed to be faster and more reliable than older versions. The only instances where it may make your Mac slow down is when you upgrade your Mac from Mojave directly to Big Sur and if your device is running low on storage. Big Sur needs a large availability of space to run so if your Mac slows down after an upgrade to Big Sur, it is probably due to this reason.

## **SHOULD I UPGRADE MY MAC TO BIG SUR?**

It is advisable to upgrade your Mac not just to Big Sur, but whenever upgrades are available. Upgrades are designed to be much faster, reliable and secure than older versions. If your Mojave still works perfectly on your Mac, you don't have to upgrade your Mac. But with time, the functionality of Mojave begins to decline so it is advisable to upgrade your Mac to Big Sur.

## **CAN MY MAC HANDLE BIG SUR? HERES HOW TO CHECK**

If your Mac is a late 2013 model or a newer one, it can handle A Big Sur update. If you are not sure what model your Mac is, you can find out by;

- Clicking the Apple menu
- Clicking "About this Mac" in the menu that pops up. This will show you the version of Mac you have.

To check which Mac devices are compatible with Big Sur, check here <https://support.apple.com> .

Using the above mentioned points as reference, putting Mojave vs Big Sur, Mojave is definitely better than Big Sur as it barely has any cons or issues, but due to the fact that it will eventually stop running following the development of new upgrades from time to time, you will have to upgrade your Mac device to Big Sur.
