

SAMSUNG GALAXY S10 OR SAMSUNG GALAXY S9+, WHICH SHOULD YOU GET?

By Ominiabohs Rona Mirabella | February 22 2022 |

Samsung continues to be one of the most popular phone manufacturers in the world, and with good reasons. The Samsung Galaxy S was first released in 2010 and they've been making waves ever since. From the very first design down to the latest version, Galaxy S22, it has been an evolutionarily awesome experience. Right now, we're going to be talking about which is a better option between the Samsung Galaxy S9+ and the Samsung Galaxy S10.

The 6.1" quad HD resolution Samsung Galaxy S10 can be described to have a "nearly frameless cinematic infinity display", which allows for a more detailed and deeper immersion in your content. Compared to the 5.8" Samsung Galaxy S9+, it has no bezel below or above the screen with a full screen coverage with a slim balanced form. While the galaxy S9+ has the regular fingerprint sensor underneath the camera at the back of the phone, the galaxy S10 has an ultrasonic fingerprint ID embedded in the display screen using soundwaves to detect the ridges of your fingerprint in 3D. The S10 is also 7.8mm deep, meaning it is thinner than the S9+ (8.5mm) despite having a larger battery. The design looks familiar to that of the S9+, but it's the fine details that make the difference – the edges are still curved but are smaller, sharper and definitely look flatter on the front than the S9+. I believe the S10 wins this round.

The S10 has a battery usage time of 34 hours and a battery size/ type of 3400Mah. It has a memory of 8GB RAM, 128GB and 8GB RAM, 512GB and supports up to 512GB microSD card. Operating system is Android pie 9.0, has a 10MP selfie camera and 3 rear cameras, 12MP telephoto camera, 12MP wide angle camera and 16MP ultra – wide camera. On the other hand, the S9+ has a battery usage time of 25 hour and a battery size/ type of 3500Mah. It has a memory space of 6GB RAM, 64GB and supports up to 512GB microSD card, has an 8MP selfie camera and a super speed dual pixel 12MP rear camera. Apart from the camera and memory space, they're both quite similar here.

For the Galaxy S10, they seem to be more bad reviews than good in general. People seem to complain about the battery life, how it doesn't last for long. As for the Galaxy S9+, some people believe that the camera quality is really nice and the device is good enough for its money's worth. All in all, it all comes down to this; bigger phones, bigger problems.

The Galaxy S10 clearly has an advantage over the S9+ due to its large screen display, bigger memory space and its sophisticated design. It is very eye catching and it is natural for people gravitate towards such. The only disadvantage the S10 would have would be its size. Unlike the S10, the Galaxy S9+ is small and easier to carry around and more pocket friendly.

In conclusion, I think the Galaxy S10 is a more preferable option as there isn't really a huge price difference between both devices. I mean, why go for the lesser option when you can get the bigger one, right?
